

DENTAL X-RAY CONSENT FORM

Dental X-rays allow the dentist to diagnose and treat conditions that cannot be detected during a clinical examination. Dental x-rays detect much more than just cavities. For example, x-rays may be needed to diagnose bone disease, evaluate the results of an injury or plan orthodontic treatment. If dental problems are found and treated early, before they become visible or painful, dental care is much more comfortable and affordable. Dental x-rays are part of a comprehensive examination.

New dental x-rays may be taken.

I have requested no dental x-rays be taken today. I understand that some dental pathology cannot be diagnosed without the use of dental x-rays. I hereby release Dr. Jamie Wymann & Staff from responsibility for any oral conditions possibly present of which go undiagnosed as a result of my request that no dental x-rays be taken.
